Your Task:-

<mark>Task 4: Picgram</mark>

Tech stack: ReactJS, styled-components, eslint, redux

Create an Application that will display images from
https://picsum.photos/v2/list?page=2&limit=100 and give users ability to like and comment
(Create, update and delete comments) on the image.

- Store the likes and comments on images in global redux store
- (Bonus points) make it responsive
- Play with design and create your best, you can take design reference from
https://www.dribble.com
-The code should be clean as per https://airbnb.io/javascript/react/ styleguide (hint:
use/configure eslint)

- Use styled-components to build reusable components
